

Day 3 – Module 2: Date Formatting

Step 1

Enter these dates in column A:

A
09/06/2026
15/07/2026
20/08/2026

===

Step 2

Select the dates and click:

Format → **Number** → **Date**

Check how Google Sheets displays them.

A
9/6/2026
15/07/2026
20/08/2026

=====

Step 3

Now click:

Format → **Number** → **Custom date and time**

Choose a format like:

A	
Wednesday, July 15, 2026 at 12:00:00 AM	
Thursday, August 20, 2026 at 12:00:00 AM	
Saturday, August 29, 2026 at 12:00:00 AM	

===

How to Check if a Cell is a Date or Text

Method 1: Change Format to Number (Best Method)

1. Select the date cell.
2. Click **Format** → **Number** → **Number**.

Result

If it's a real date:

Wednesday, July 15, 2026

will change to something like:

46,953

(or another serial number)

✅ This means it is a **real date value**.

=====

Method 2: Check Alignment

By default:

Data Type	Alignment
Number/Date	Right
Text	Left

Example:

15/07/2026

If it stays on the **left side**, it is usually text.

If it moves to the **right side**, it is likely a date/number.

 This method is not always reliable because alignment can be changed manually.

A
Wednesday, July 15, 2026 at 12:00:00 AM
Thursday, August 20, 2026 at 12:00:00 AM
Saturday, August 29, 2026 at 12:00:00 AM

=====

▼ fx =ISNUMBER(A4)		
A	B	C
Wednesday, July 15, 2026 at 12:00:00 AM	TRUE	
Thursday, August 20, 2026 at 12:00:00 AM		
Saturday, August 29, 2026 at 12:00:00 AM		
abc	FALSE	

Method 3: Formula Test

Suppose the value is in A1.

In another cell type:

=ISNUMBER(A1)

Result:

- TRUE → Real Date/Number
- FALSE → Text

This is the most professional method.
