

# Text Wrapping

Text Wrapping is used when the text is too long for a cell.

## Practice

1. Click cell **B1** (Employee Name).
2. Replace it with:

Employee Full Name

3. Select cell **B1**.
4. Click **Format** → **Wrapping** → **Wrap**.

OR

1. Select B1.
2. Click the **Text Wrapping** icon in the toolbar.
3. Choose **Wrap**.

=====

## Let's do it step by step

### Step 1

Click **B1**.

### Step 2

Replace the text with:

Employee Full Name and Contact Details

### Step 3

Make Column B narrower:

1. Move the mouse between **B** and **C** column headers.

2. Drag the border to the **left** to reduce the width.

#### **Step 4**

Select **B1**.

#### **Step 5**

Click:

**Format** → **Wrapping** → **Wrap**

OR

Click the **Text Wrapping** icon in the toolbar → **Wrap**.

#### **Result**

Instead of one long line:

Employee Full Name and Contact Details

you should see something like:

Employee Full Name

and Contact

Details

inside the same cell.

#### **Step 6 (Important)**

If the text wraps into multiple lines but the row height does not increase:

1. Right-click **Row 1**
2. Choose **Resize Row**
3. Select **Fit to data**

Now the wrapped text will be fully visible.

#### **Quick Check**

After applying Wrap, send me a screenshot showing:

- Column B made narrower
- Text "Employee Full Name and Contact Details"
- Wrapped into 2–3 lines

Result:

| Employee ID | Employee Full Name and Contact Details | Department | Salary |  |
|-------------|----------------------------------------|------------|--------|--|
| EMP001      | Ravi                                   | Sales      | 25000  |  |
| EMP002      | Kumar                                  | HR         | 30000  |  |
| EMP003      | Priya                                  | Finance    | 35000  |  |
| EMP004      | Arun                                   | Marketing  | 28000  |  |
| EMP005      | Divya                                  | IT         | 40000  |  |

=====

## Step 5 Verification

- ✓ Text changed to **Employee Full Name and Contact Details**
- ✓ Column width reduced
- ✓ Wrap Text applied correctly
- ✓ Text is displayed on multiple lines
- ✓ Row height automatically increased

This is exactly how **Text Wrapping** should work in Google Sheets.

## Step 5 Completed

=====
