

Great! Let's begin **Day 5 – Topic 1: IF Function** in detail.

What is IF Function?

The IF function allows Excel to make a decision based on a condition.

Example:

If Marks $\geq 50 \rightarrow$ Pass
Otherwise $\rightarrow$ Fail

Syntax

=IF(condition, value_if_true, value_if_false)

Meaning

Part	Description
condition	What to check
value_if_true	Result if condition is TRUE
value_if_false	Result if condition is FALSE

Demo Table

Create this in Excel:

A	B
Name	Marks
Ram	90
Sam	35
Hari	75

Priya 40

Step 1

In cell **C1**, type:

Result

Result

Table becomes:

Name	Marks	Result
Ram	90	
Sam	35	
Hari	75	
Priya	40	

Step 2

Click cell **C2** and enter:

=IF(B2>=50,"Pass","Fail")

Press **Enter**.

Result:

Name	Marks	Result
Ram	90	Pass

▼ fx =IF(B2>=50,"Pass","Fail")			
A	B	C	
Name	Marks	Result	
Ram	90	Pass	
Sam	35		
Hari	75		
Priya	40		

=====

Step 3

Drag the fill handle (small square at bottom-right corner of C2) downward.

Final Result:

Name	Marks	Result
Ram	90	Pass
Sam	35	Fail
Hari	75	Pass
Priya	40	Fail

▼ fx Priya			
A	B	C	
Name	Marks	Result	
Ram	90	Pass	
Sam	35	Fail	
Hari	75	Pass	
Priya	40	Fail	

=====

Real MIS Example

Employee **Sales**
e

A 12000

B 8000

C 15000

D 7000

▼ | fx =IF(B2>=10000,"Achieved","Not Achieved")

A	B	C	D
Employee	Sales		
A	12000	Achieved	
B	8000	Not Achieved	
C	15000	Achieved	
D	7000	Not Achieved	

Formula:

=IF(B2>=10000,"Achieved","Not Achieved")

Output:

Employee **Sales** **Status**
e

A 12000 Achieved

B 8000 Not Achieved

C 15000 Achieved

D 7000 Not Achieved

=====

fx =IF(B2>=50,"Pass","Fail")			
A	B	C	D
Student	Marks		
John	88	Pass	
David	42	Fail	
Mary	67	Pass	
Peter	25	Fail	

Practice Task

Create this table:

Student	Marks
John	88
David	42
Mary	67
Peter	25

Apply:

=IF(B2>=50,"Pass","Fail")

Expected Output:

Student	Marks	Result
John	88	Pass

David	42	Fail
Mary	67	Pass
Peter	25	Fail

=====
