

COUNT Function

What is COUNT Function?

The **COUNT** function counts only the cells that contain **numbers**.

Syntax

=COUNT(range)

Demo Table

Create this table:

Sales

12000

15000

18000

10000

25000

Formula

=COUNT(A2:A6)

Result

5

Because there are **5 numeric values**.

▼ fx =COUNT(A2:A6)		
A	B	
Sales		
12000		
15000		
18000		
10000		
25000	5	

=====

Example with Mixed Data

Data

100

Ravi

200

Chennai
i

300

Formula:

=COUNT(A2:A6)

Result:

3

Why?

COUNT ignores text values.

Value	Counted?
100	Yes
Ravi	No
200	Yes
Chennai	No
300	Yes

Total = 3

▼ <i>fx</i> =count(A2:A6)	
A	B
Data	
100	
Ravi	
200	
Chennai	
300	3

=====

Real MIS Example

Employee	Sales
----------	-------

A	12000
---	-------

B	18000
---	-------

C	15000
---	-------

D	22000
---	-------

E	9000
---	------

To find how many employees have sales entries:

=COUNT(B2:B6)

Result:

5

▼ fx =COUNT(B2:B6)			
A	B	C	
Employee	Sales		
A	12000		
B	18000		
C	15000		
D	22000		
E	9000	5	

=====

Practical Example

Marks

85

72

65

90

Formula:

=COUNT(A2:A6)

Result:

4

Because one cell is blank.

▼ fx =count(A2:A6)			
A	B	C	
Marks			
85			
72			
65			
90	4		

=====

Difference Between COUNT and SUM

Function	Purpose
----------	---------

COUNT Counts
 numbers

SUM Adds numbers

Example:

=COUNT(A2:A6)

Result:

5

=SUM(A2:A6)

Result:

80000

=====

▼ <i>fx</i> =sum(A2:A6)			
A	B	C	
Marks			
85			
72			
65			
90		4	count
	312		sum

=====

Practice Exercise

Create:

Sales

5000

7000

9000

11000

13000

Formula:

=COUNT(A2:A6)

Expected Result:

5

▼ <i>fx</i> =COUNT(A2:A6)			
A	B	C	
Sales			
5000			
7000			
9000			
11000			
13000	5
