

Day 3 – Module 4: Relative References (A1)

This is where formulas become powerful.

Step 1: Create This Table

Price	Qty	Amount
100	2	
200	3	
300	4	

=====

Step 2: Enter Formula

Click **C2** and type:

C2

fx

=A2*B2

	A	B	C	D
1	Price	Qty	Amount	
2	100	2	200	
3	200	3	600	
4	300	4	1200	
5				

What Happened?

The formula automatically changed:

=A2*B2

to

=A3*B3

and then

=A4*B4

This is called a **Relative Reference** because the cell references change relative to their position.
